Classical period

The Library of Alexandria, in Egypt, was the largest and most significant great library of the ancient world [12] It flourished under the patronage of the Ptolemaic dynasty and functioned as a major center of scholarship from its construction in the 3rd century BC until the Roman conquest of Egypt in 30 BC.

More Info

Publishers

Private or personal libraries made up of written books (as opposed to the state or institutional records kept in archives) appeared in classical Greece in the 5th century BC.

Early libraries

Library history is the academic discipline that studies the history of libraries; it is a branch of the history of science and of history. Things were kept in government and temple records in ancient Egypt [2] The earliest discovered papyrus scrolls were kept at Ugarit.

More About Libraries

The library's ruins were hidden until 1994. The library was destroyed in 7 AD by an earthquake. Austrian excavations led to this discovery. The library had collapsed during an earthquake.

Second Law: Every reader has his/her book

This law suggests that every member of the community should be able to obtain materials needed. Dr. Ranganathan felt that all individuals from all social environments were entitled to library service, and that the basis of library use was education, to which all were entitled.

More Info

Third Law: Every book its reader

This principle is closely related to the second law, but it focuses on the item itself, suggesting that each item in a library has an individual or individuals who would find that item useful.

First Law: Books are for use

The first law constitutes the basis of library service. Dr. Ranganathan observed that books are not to be stored to prevent their removal and that they are to be used for storage and preservation rather than for use.

Fourth Law: Save the time of the reader

This law is a recognition that part of the library service is its ability to meet the needs of the user efficiently. To this end, Dr. Ranganathan recommended the use of appropriate methods to improve library management.
